Dear Madam, dear Sir,

Currently student in 4th year of engineering school in computer science, speciality Big DATA, I'm looking for a 2 months internship during the 2021 summer.

I'm passionate about the deep learning sector, in particular in the computer vision field, and I want to apply it to the health sector.
I have already implemented machine learning models during my school curriculum, with tools such as Python, Numpy, Scikit-learn, Keras, Tensorflow,... and I now
want to apply them in the world of work.

I'm also developing a lot on mobile devices, mostly with the Flutter framework as it can work on both IOS and Android, but also with Java for native Android.
You can take a look at two of my project on GitHub, where I have re-done the design of Lydia and Tricount, two existing apps : https://github.com/Neirpyck?tab=repositories

I invite you to take a look at my CV, in attachment, and to contact me, either in French or in English, if my profile interests you.
You can join me by phone at the +33 0782814975 or by mail at cyprien.barbault@protonmail.com

Best regards,
Cyprien BARBAULT
